SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 21/10/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 19/09/2024, issued 19/09/2024), allergen declaration and IFRA 51st Amendment certificate (01/07/2024). The manufacturer declares component concentrations as ranges; the classification was calculated using the upper limit of each range, which coincides with the exact values given in the manufacturer's IFRA certificate and allergen declaration (d-limonene 6.6%, coumarin 3.4%, cinnamal 3.2%, α -methylcinnamaldehyde 4%). The calculation reproduces the manufacturer's classification of the pure fragrance (H317, H411). The 5%, 10% and 25% preparations of the manufacturer (in dipropylene glycol) are classified H317, H412, consistent with the calculated 5% and 10% preparations; cinnamal (Skin Sens. 1A, limit 0.1%) keeps H317 down to about 3% fragrance. Because the IFRA Category 10A limit is 15.29%, the diffuser preparation was calculated at 15% in Augéo Clean Multi instead of 25%.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern.
