SECTION 16: Other information

Revision	Version 1.1 — Eco Candle Project edition, 04/11/2026. Based on the manufacturer's SDS for the pure fragrance (revision of 31/08/2023, issued 31/08/2023), allergen declaration and IFRA 51st Amendment certificate (27/03/2024). The manufacturer declares component concentrations as ranges; the classification was calculated conservatively using the upper limit of each range, which agrees with the exact values given in the manufacturer's IFRA certificate and allergen declaration (e.g. citral 6.08%, linalool 1.856%, amyl cinnamal 1.8%) and reproduces the manufacturer's classification of the pure fragrance (H315, H317, H411). For the 5% preparation this calculation gives Aquatic Chronic 3 — H412 (the Aquatic Chronic 1 components amyl salicylate, acetyl cedrene and hexamethylindanopyran add up to 0.29%, i.e. 100 × 0.29 = 29% ≥ 25%), whereas the manufacturer's SDS for the 5% dilution is not classified; Eco Candle Project keeps the more protective result. The 10% preparation is consistent with the manufacturer's SDS for that dilution (H412). Because the IFRA Category 10A limit is 19.73%, the diffuser preparation was calculated at 19% in Augeo Clean Multi instead of 25%. Changes from version 1.0 (21/10/2026): the generic cut-off values of Regulation (EC) No 1272/2008, Annex I, Table 1.1 are now applied in the summation method for aquatic hazards (ingredients below 1 % — or 0.1 % ÷ M for Aquatic Acute 1 / Chronic 1 — are not taken into account). 5% preparation: H412 → not classified. Composition, other hazard classes and IFRA limits unchanged.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; HHCB = hexamethylindanopyran; SVHC = Substance of Very High Concern.
