SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Acute toxicity (oral)	Acute Tox. 4 — H302
Aspiration hazard	Asp. Tox. 1 — H304
Skin sensitisation	Skin Sens. 1 — H317
Aquatic hazard, acute	Aquatic Acute 1 — H400
Aquatic hazard, chronic	Aquatic Chronic 2 — H411

Classification calculated by Eco Candle Project with the CLP calculation method (Regulation (EC) No 1272/2008), using the upper limit of each concentration range declared by the manufacturer, which coincides with the exact values of the manufacturer's allergen declaration and IFRA certificate (benzyl benzoate 40.73%, hexyl cinnamal 15.5%, coumarin 2%, linalool 1.75%); for hexyl salicylate the exact value of the IFRA certificate (0.58%) was used. The result reproduces the manufacturer's classification (H302, H304, H317, H400, H411). The manufacturer's label shows H410, which does not follow from its own classification (Aquatic Chronic 2): the Aquatic Chronic 1 components (hexamethylindanopyran, AHTN, hexyl salicylate, ADBI) add up to about 10%, below the 25% threshold, so Aquatic Chronic 2 — H411 is applied. The aspiration hazard (H304) results from patchouli oil and grapefruit oil (14.05%, $\geq 10\%$). The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5%, 10% and 4% preparations were calculated by Eco Candle Project. Because the IFRA Category 10A limit is 4.66%, the diffuser preparation was calculated at 4% in Augeo Clean Multi instead of 25%.
