SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Acute toxicity (oral)	Acute Tox. 4 — H302
Skin sensitisation	Skin Sens. 1 — H317
Aquatic hazard, acute	Aquatic Acute 1 — H400
Aquatic hazard, chronic	Aquatic Chronic 2 — H411

Classification calculated by Eco Candle Project with the CLP calculation method (Regulation (EC) No 1272/2008), using the upper limit of each concentration range declared by the manufacturer, which coincides with the exact values of the manufacturer's allergen declaration and IFRA certificate (benzyl benzoate 84.9%, limonene 2.55%). In addition to the manufacturer's classification (H302, H317, H411), Aquatic Acute 1 — H400 is applied because benzyl benzoate (Aquatic Acute 1) is present above 25%. Lemon oil (Repr. 2) is present at no more than 2%, below the 3% classification limit. The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5% and 10% preparations were calculated by Eco Candle Project. IFRA limits this fragrance to 2.23% in reed diffusers (Category 10A): it is not suitable for diffusers, so no diffuser SDS is issued.
