SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Skin irritation	Skin Irrit. 2 — H315
Skin sensitisation	Skin Sens. 1 — H317
Aquatic hazard, chronic	Aquatic Chronic 3 — H412

Classification according to Regulation (EC) No 1272/2008 [CLP], as given in the manufacturer's SDS (calculation method). The manufacturer declares component concentrations as ranges; a calculation with the upper limit of each range would overestimate the aspiration and aquatic hazards, so the manufacturer's classification, based on the exact formula, is followed.

SECTION 16: Other information

Revision	Version 1.1 — Eco Candle Project edition, 18/11/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 17/03/2026, issued 17/03/2026), allergen declaration and IFRA 51st Amendment certificate (17/03/2026). The manufacturer declares component concentrations as ranges; the classification was calculated using the exact concentration given in the manufacturer's allergen declaration for the ingredients listed there and, conservatively, the upper limit of the range for all other ingredients. Changes from version 1.0 (29/09/2026): the generic cut-off values of Regulation (EC) No 1272/2008, Annex I, Table 1.1 are now applied in the summation method for aquatic hazards (ingredients below 1 % — or 0.1 % ÷ M for Aquatic Acute 1 / Chronic 1 — are not taken into account). 10% preparation: H412 → not classified. Composition, other hazard classes and IFRA limits unchanged. This edition re-issues the complete set of safety data sheets of this fragrance in the current Eco Candle Project format; the EUH208 list now follows the calculation rule (sensitisers at or above 1/10 of their classification limit).
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern.
