## SECTION 16: Other information

| | |
|---|---|
| **Revision** | Version 1.1 — Eco Candle Project edition, 04/11/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 21/07/2023, issued 21/07/2023), allergen declaration and IFRA 50th Amendment certificate (18/07/2023). The manufacturer declares component concentrations as ranges; the classification was calculated conservatively with the upper limit of each range (which coincides with the exact values of the manufacturer's allergen declaration for linalool and hexyl cinnamal) and reproduces the manufacturer's classification of the pure fragrance (H315, H317, H319, H411). The 5% preparation is consistent with the manufacturer's SDS for that dilution (not classified, EUH208). For the 10% preparation this calculation gives Aquatic Chronic 3 — H412 (sum 100×Chronic 1 + 10×Chronic 2 + Chronic 3 above 25% at the upper limits), whereas the manufacturer's 10% SDS, based on lower concentrations within the declared ranges, is not classified; Eco Candle Project keeps the more protective result. The manufacturer's 25% SDS (H412, in dipropylene glycol) differs from the Eco Candle Project 25% and 20% preparations because these are made in Augeo Clean Multi, which is itself classified Eye Irrit. 2 (H319). Because the IFRA Category 10A limit is 20.96%, the diffuser preparation is also issued at 20% in Augeo Clean Multi. Changes from version 1.0 (22/10/2026): the generic cut-off values of Regulation (EC) No 1272/2008, Annex I, Table 1.1 are now applied in the summation method for aquatic hazards (ingredients below 1 % — or 0.1 % ÷ M for Aquatic Acute 1 / Chronic 1 — are not taken into account). 10% preparation: H412 → not classified. Composition, other hazard classes and IFRA limits unchanged. |
| **Abbreviations** | ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern. |
