SECTION 2: Hazards identification

2.1 Classification of the substance or mixture

Skin sensitisation	Skin Sens. 1 — H317
Aquatic hazard, chronic	Aquatic Chronic 3 — H412

Classification calculated by Eco Candle Project with the CLP calculation method (Regulation (EC) No 1272/2008). The manufacturer declares concentrations as ranges whose upper limits coincide with the exact values of its allergen declaration and IFRA certificate (d-limonene 6.816%, eugenol 3.2414%); the upper limits were therefore used. Eugenol and beta-caryophyllene are constituents of the clove leaf oil, and most of the declared d-limonene is contained in the orange oil ($\approx 95\%$ limonene); to avoid counting the same substance twice, only the free d-limonene not supplied by the orange oil ($\approx 3.0\%$) was added to the calculation. The manufacturer classifies the pure fragrance only as Skin Sens. 1 — H317. The calculation additionally gives Aquatic Chronic 3 — H412 (orange oil, Aquatic Chronic 2, $4\% \times 10$ plus Aquatic Chronic 3 components $> 25\%$); Eco Candle Project keeps this more protective result. The sum of Asp. Tox. 1 components ($\approx 11\%$) is close to the 10% threshold; the aspiration hazard also depends on the kinematic viscosity of the mixture ($\leq 20.5 \text{ mm}^2/\text{s}$ at 40°C), which only the manufacturer knows, and the manufacturer does not classify the fragrance for aspiration hazard — its classification is followed on this point. The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5%, 10%, 22% and 25% preparations were calculated by Eco Candle Project. Because the IFRA Category 10A limit is 22.89%, the diffuser preparation is also issued at 22% in Augeo Clean Multi.
