IFRA (50th)	Candles (Cat. 12): no restriction — 10% complies.

SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 22/10/2026. Based on the manufacturer's SDS for the pure fragrance (version 12 of 06/03/2023, issued 30/10/2023), allergen declaration and IFRA 50th Amendment certificate (30/10/2023). The manufacturer declares component concentrations as ranges. The exact values of the manufacturer's allergen declaration were used for cinnamal (60%) and benzyl benzoate (21.21%) and the upper limit of the range for cinnamyl nitrile (0.5%, conservative); with these values the calculation reproduces the manufacturer's classification of the pure fragrance (H312, H315, H317, H319, H412). Acute dermal toxicity: ATE mix $\approx$ 1,818 mg/kg, from the converted acute toxicity point estimate for Category 4 dermal (1,100 mg/kg, CLP Annex I, Table 3.1.2) of cinnamal and cinnamyl nitrile. Cinnamal is classified Skin Sens. 1A by the manufacturer (concentration limit 0.1%). The manufacturer has not issued SDSs for diluted preparations — the classifications of the 5% and 10% preparations were calculated by Eco Candle Project with the CLP calculation method. IFRA limits this fragrance to 0.81% in reed diffusers (Category 10A): it is not suitable for diffusers, so no diffuser SDS is issued. Classification of the 10% preparation calculated by Eco Candle Project.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; SVHC = Substance of Very High Concern.
