PCN / UFI	Classified for health hazards (H317): a PCN with its own UFI is required if this preparation is placed on the market; the fragrance UFI (US0U-D3K8-Y003-MDWM) can be declared as a component (MiM).

SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 21/10/2026. Based on the manufacturer's SDS for the pure fragrance (version 1.0 of 12/06/2023, issued 12/06/2023), allergen declaration and IFRA 50th Amendment certificate (12/06/2023). The manufacturer declares component concentrations as ranges; the classification was calculated conservatively using the upper limit of each range (these coincide with the exact values of the manufacturer's IFRA certificate and allergen declaration, e.g. OTNE 29.16%, benzyl benzoate 13.42%, linalool 2.97%), which reproduces the manufacturer's classification of the pure fragrance (H315, H317, H318, H410). Serious eye damage (H318) results from Chinese cedarwood oil (Skin Corr. 1, 4.05%) together with borneol and camphor (Eye Dam. 1): sum 5.27% $\geq$ 3%. The 10% preparation is consistent with the manufacturer's SDS for that dilution (H317, H411). The manufacturer has not issued an SDS for the 5% preparation — its classification was calculated by Eco Candle Project (H317, H412: OTNE, a skin sensitiser, is present at 1.46%, above the 1% classification limit). The IFRA Category 10A limit (8.23%) does not allow a 25% reed-diffuser preparation; the diffuser SDS is therefore issued for 8% in Augéo Clean Multi. Classification of the 10% preparation calculated by Eco Candle Project.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; OTNE = tetramethyl acetyloctahydronaphthalenes; SVHC = Substance of Very High Concern.
