PCN / UFI	Not required — the mixture is not classified as hazardous.
IFRA (51st)	Candles (Cat. 12): no restriction — 10% complies.

SECTION 16: Other information

Revision	Version 1.0 — Eco Candle Project edition, 22/10/2026. Based on the manufacturer's SDS for the pure fragrance (version 3.0 of 21/03/2023, issued 10/09/2021), allergen declaration and IFRA 51st Amendment certificate (25/04/2024). The manufacturer declares component concentrations as ranges. Exact values from the manufacturer's allergen declaration and IFRA certificate were used where available (hexyl cinnamal 4.8209%, benzyl salicylate 2.5208%, citral 0.1157%, triplal 0.7713%) and the midpoint of the range otherwise; with these values the calculation reproduces the manufacturer's classification of the pure fragrance (H315, H317, H341, H351, H412). Using the upper limit of every range would add Asp. Tox. 1 — H304 (orange oil + lemon terpenes 10.6%, just above the 10% limit), which the manufacturer — who knows the exact formula — does not apply. The germ cell mutagenicity and carcinogenicity classifications (Muta. 2 — H341, Carc. 2 — H351) come from basil oil (estragole/methyl eugenol content) above the 1% generic limit; at 5% and 10% basil oil is below 1% and these classifications do not apply. The 10% preparation is consistent with the manufacturer's SDS for that dilution in dipropylene glycol (not classified, EUH208). IFRA limits this fragrance to 1.02% in reed diffusers (Category 10A): it is not suitable for diffusers, so no diffuser SDS is issued. Classification of the 10% preparation calculated by Eco Candle Project.
Abbreviations	ATE = Acute Toxicity Estimate; UFI = Unique Formula Identifier; PCN = Poison Centre Notification; SCL = specific concentration limit; HHCB = hexamethylindanopyran; SVHC = Substance of Very High Concern.
